OBJECTIVE

Over all experience of 6 years and Technical Support professional with 3.5 years of experience in incident, change, and problem management, looking to leverage my technical and customer support skills in a growth-oriented IT environment. Looking for an opportunity to apply my problem-solving abilities and expand my knowledge in a fast-paced IT environment.

PROFESSIONAL SUMMARY

- Technical Support Engineer with 3.5 years of experience in Networking and enterprise TAC environments (Aruba, Juniper, Palo Alto, Cisco, Check Point).
- Strong understanding of OSI model and packet-level concepts including DHCP, DNS, ARP, TCP/IP, UDP, IPsec VPN, and SSL.
- Skilled in network monitoring with solid theoretical and troubleshooting knowledge of SNMP and WMI protocols.
- Experienced in providing first-level support to global customers through phone, chat, and web channels.
- Proficient in analysing logs and network traffic using Wireshark.
- Ability to collaborate with advanced support and development teams for escalations, bug resolution, and product improvements.
- Focused on maintaining high CSAT scores through clear communication, timely issue resolution, and customer-first approach.
- Strong documentation skills with experience creating and updating knowledge base articles.
- Quick learner with interest in expanding skills in MS SQL, Windows Servers, Cloud Computing, System & Security tools, and database monitoring.
- Good communication skills (verbal and written) with commitment to quality, professionalism, and continuous improvement.

EXPERIENCE

Worked on ICICI BANK From AUG 2018 TO OCT 2024

EDUCATION

BE (ECE) From Vivekananda institute of engineering and technology for women 2018

TECNICAL SKILLS

Networking	: Basic LAN/WAN troubleshooting, IP Addressing, DNS, DHCP Wi-Fi configuration & troubleshooting, Router-Switch basic setup.
Software	: MS Office (Word, Excel, Outlook, PowerPoint).
Tools	: Any Desk, TeamViewer, ServiceNow, Jira.
ITIL	: Incident, Change and Problem management.

Roles and Responsibilities:

- Provide advanced technical support for global customers by troubleshooting network monitoring issues involving SNMP, WMI, and system-level performance metrics**.**
- Diagnose and resolve complex server-related problems including Windows Server administration, service failures, system performance issues, permissions, and event log analysis.
- Configure, validate, and troubleshoot SNMPv1/v2/v3 settings on network devices and assist customers with proper MIB/OID interpretation.
- Troubleshoot WMI connectivity issues, query failures, authentication problems, firewall restrictions, and Windows registry-related monitoring issues.
- Perform detailed packet and log analysis using Wireshark to identify root causes of communication failures between servers, agents, and monitored devices.
- Manage and resolve support tickets end-to-end with accurate documentation, timely updates, and SLA compliance.
- Collaborate with engineering and development teams on escalated issues involving bugs, product defects, and enhancement requests.
- Guide customers through server configuration, agent installation, Windows service troubleshooting, and system optimization steps.
- Contribute to knowledge base by documenting troubleshooting procedures, FAQs, and best practices for SNMP, WMI, and Server Admin topics.
- Monitor recurring patterns and provide feedback to improve product stability, performance, and customer experience.
- Maintain high customer satisfaction (CSAT) through clear communication, ownership of issues, and effective technical guidance.
- Mentor junior team members on SNMP/WMI troubleshooting techniques, server administration fundamentals, and case-handling best practices.

Description:
